

High Accuracy Current/Voltage Sensing and Protection IC

General Description

The RT9553A is designed for over-current detection and over-/under-voltage protection.

It provides users to set over-current threshold by the ILIM pin to compare that senses dropping voltage between CSP pin and CSN pin. Moreover, users can set over-/under-voltage threshold by the OVSET pin/UVSET pin to compare with the CSP voltage. The RT9553A is available in the WDFN-10L 3x3 package.

Ordering Information

RT9553A □ □

- Package Type
QW : WDFN-10L 3x3 (W-Type)
- Lead Plating System
G : Green (Halogen Free and Pb Free)

Note :

Richtek products are :

- ▶ RoHS compliant and compatible with the current requirements of IPC/JEDEC J-STD-020.
- ▶ Suitable for use in SnPb or Pb-free soldering processes.

Marking Information

3U= : Product Code
YMDNN : Date Code

Features

- Common Mode Input Range up to 24V
- VCC Operating Current : 200µA
- VCC Shutdown Current : 10µA (under S3/S4/S5)
- Programmable Over-Current Level
- One Shot $\overline{\text{PROCHOT}}$ Signal when OCP
- Pull Low RESET Signal when OVP/UV
- OVP/UV with 8% Recover Hysteresis Range
- Programmable OVP/UV De-glitch Time

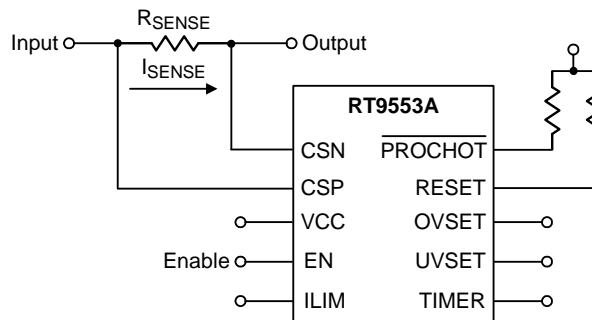

Applications

- Notebook

Pin Configurations

Simplified Application Circuit

Functional Pin Description

Pin No.	Pin Name	Pin Function
1	CSP	Positive Current Sense Input.
2	VCC	Power Supply Input. Connect this pin to 5V and place a minimum 0.1μF decoupling capacitor. The decoupling capacitor should be placed to this pin as close as possible.
3	ILIM	Over-Current Trip Point Setting Input. The setting range is from 0.4V to 2V.
4	EN	Enable Control Input.
5	TIMER	Deglitch Time Setting of OV/UV Protection. Connect a resistor from this pin tied to GND to set deglitch time. Do not parallel any filter capacitor to this pin.
6	UVSET	Under-Voltage Trip Point Setting Input. The setting range is from 0.55V to 3V.
7	OVSET	Over-Voltage Trip Point Setting Input. The setting range is from 0.55V to 3V.
8	RESET	Open-Drain Output. Connect to an external resistor to pull high. When OV/UV occurs, this pin will be pulled low.
9	PROCHOT	Open-Drain Output. Connect to an external resistor to pull high. When OC occurs, this pin will be pulled low.
10	CSN	Negative Current Sense Input.
11 (Exposed Pad)	GND	Ground. The exposed pad must be soldered to a large PCB and connected to GND for maximum power dissipation.

Function Block Diagram

Operation

The RT9553A consists of a current sensing amplifier, and two comparators, and it provides the following functions : over-current protection, over-voltage protection and under-voltage protection.

Over-Current Protection

With mΩ order of resistor shunts between CSP and CSN, the current sensing amplifier multiplies the voltage between CSP and CSN by 20 and compares the result with the ILIM voltage. If the output voltage of current sensing amplifier is larger than the ILIM voltage, the $\overline{\text{PROCHOT}}$ voltage is pulled low.

OVP/UVP Deglitch Time

The output signal of OV_comparator or UV_comparator is delayed by deglitch timer. The delayed time is decided by the resistor (see spec.) connected to the TIMER pin.

Over-/Under-Voltage Protection

The OVSET voltage is set by users and it compares with the voltage which is 1/9 of CSP voltage with OV_comparator. The UVSET voltage is set by users and it also compares with the voltage which is 1/9 of CSP voltage with UV_comparator. Either the output of OV_comparator or UV_comparator is high, the RESET voltage is pulled low.

Absolute Maximum Ratings (Note 1)

- CSP/CSN to GND ----- -0.3V to 28V
- VCC, ILIM, EN, UVSET, OVSET, RESET, $\overline{\text{PROCHOT}}$ to GND ----- -0.3V to 6V
- Power Dissipation, P_D @ $T_A = 25^\circ\text{C}$
 WDFN-10L 3x3 ----- 3.27W
- Package Thermal Resistance (Note 2)
 WDFN-10L 3x3, θ_{JA} ----- 30.5°C/W
 WDFN-10L 3x3, θ_{JC} ----- 7.5°C/W
- Lead Temperature (Soldering, 10 sec.) ----- 260°C
- Junction Temperature ----- 150°C
- Storage Temperature Range ----- -65°C to 150°C
- ESD Susceptibility (Note 3)
 HBM (Human Body Model) ----- 2kV
 MM (Machine Model) ----- 200V

Recommended Operating Conditions (Note 4)

- High-Side Voltage, VCSP/VCSN ----- 5V to 24V
- Supply Voltage, VCC ----- 4.5V to 5.5V
- Junction Temperature Range ----- -40°C to 125°C
- Ambient Temperature Range ----- -40°C to 85°C

Electrical Characteristics

($V_{CC} = 5V$, $T_A = 25^\circ\text{C}$, unless otherwise specified)

Parameter	Symbol	Test Conditions	Min	Typ	Max	Unit
CSN CSP Input						
Input Voltage Range	V_{CSP}, V_{CSN}		5	--	24	V
$I_{CSN} + I_{CSP}$		VCC = 5V, EN High	--	50	--	μA
		VCC = 5V, EN Low	--	--	5	
VCC Input						
VCC Operating Current	I_{VCC}		--	200	--	μA
VCC Shutdown Current	I_{VCC_shd}		--	--	10	μA
VCC POR Rising Voltage	V_{IN_POR}	Rising	2.8	--	3.7	V
		Hysteresis	--	400	--	mV
Enable						
Enable Input Voltage	Logic-High	V_{IH}	0.7	--	--	V
	Logic-Low	V_{IL}	--	--	0.3	
Over Current Protection						
System Response Time			--	50	--	μs
Open-Drain Output Duration	T_{PROCHOT}		10	--	18	ms
Open-Drain Output Ron	$R_{on_PROCHOT}$		--	--	10	Ω

Parameter	Symbol	Test Conditions	Min	Typ	Max	Unit
Input Current Sensing Accuracy	OC_{acc}	$V_{ILIM} = 0.4V \text{ to } 2V$	--	--	5	%
$\overline{PROCHOT}$ Leakage Current	$I_{leak_PROCHOT}$	EN Low	--	--	5	μA
ILIM Leakage Current	I_{leak_ILIM}	EN Low	--	--	5	μA
ILIM Operation Range	V_{ILIM}		0.4	--	2	V
Over-/Under-Voltage Protection						
OVP Accuracy	OVP_{acc}	$V_{OVSET} = 0.55V \text{ to } 3V$	--	--	5	%
OVP Recover Hysteresis Range		$V_{OVSET} = 0.55V \text{ to } 3V$	--	8	--	%
UVP Accuracy	UVP_{acc}	$V_{UVSET} = 0.55V \text{ to } 3V$	--	--	5	%
UVP Recover Hysteresis Range		$V_{UVSET} = 0.55V \text{ to } 3V$	--	8	--	%
Open Drain Output Ron	R_{on_RESET}	$I_{Sink} = 10mA$	--	--	10	Ω
RESET Leakage Current	I_{leak_RESET}	EN Low	--	--	5	μA
OVP/UVP De-glitch Time	T_{Timer}	$R_{Timer} = 375k$	--	15	--	μs
		$R_{Timer} = 125k$	--	5	--	

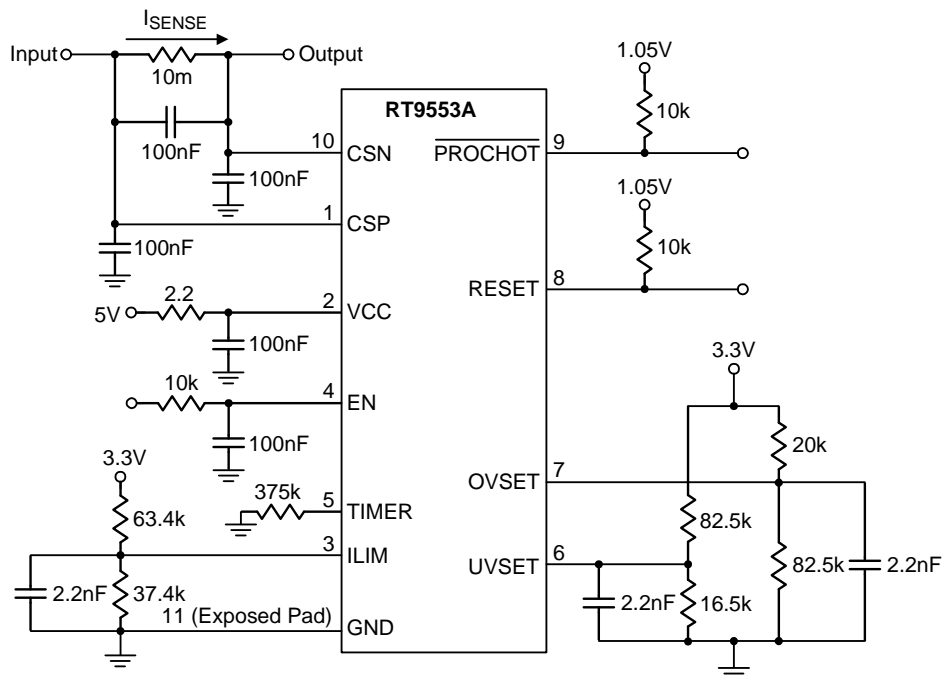

Note 1. Stresses beyond those listed “Absolute Maximum Ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions may affect device reliability.

Note 2. θ_{JA} is measured at $T_A = 25^\circ C$ on a high effective thermal conductivity four-layer test board per JEDEC 51-7. θ_{JC} is measured at the exposed pad of the package.

Note 3. Devices are ESD sensitive. Handling precaution is recommended.

Note 4. The device is not guaranteed to function outside its operating conditions.

Mask Time

Application Information

The RT9553A provides OVP, UVP, OCP protection functions with RESET, PROCHOT indicator to inform system. It can be operated minimize external components of switching power supply systems to achieve protection. For easily using and increasing PCB space utilization, the RT9553A is used in notebook applications.

Over-Voltage Protection (OVP)

The CSP pin voltage can be continuously monitored for over-voltage condition.

When the CSP pin voltage exceeds the setting threshold at the OVSET pin, the over-voltage protection will be triggered, and the RESET pin will be pull low after a deglitch time, the RESET is resumed when the CSP pin voltage down to 8% hysteresis.

For more details, please refer to the following information.

The equation of over-voltage setting threshold is shown as below :

$$V_{OVSET} = 3.3V \times \frac{R2}{R1+R2}$$

$$V_{CSP} = 3.3V \times \frac{R2}{R1+R2} \times 9$$

We suggest that the total resistance of divider network should be higher than 100kΩ.

V_{CSP} is over-voltage protection trigger point.

Figure1. Setting Network of Over-Voltage Protection and Under-Voltage Protection

Under-Voltage Protection (UVP)

The principle of under-voltage protection is the same as over-voltage protection function. The under-voltage protection threshold is set by the UVSET pin.

When the CSP pin voltage is lower the setting threshold at the UVSET pin, the under-voltage protection will be triggered, and the RESET pin will be pull low after a deglitch time, the RESET is resumed when the CSP pin voltage up to 8% hysteresis.

Over-Current Protection (OCP)

As an industry standard, high accuracy current sense amplifier is used to monitor the input current that flows through current sense resistor. The RT9553A detects CSP-CSN differential voltage across the current sense resistor to monitor input current. The equation of over-current protection is shown as below :

$$V_{ILIM} = 3.3V \times \frac{R6}{R5 + R6}$$

$$(I_{SENSE} \times R_{SENSE}) \times 20 = V_{ILIM}$$

$$I_{SENSE} = \frac{V_{ILIM}}{20 \times R_{SENSE}}$$

We suggest that the total resistance of divider network should be higher than 100kΩ.

I_{SENSE} is over-current protection trigger point.

The 20 is amplification of internal error amplifier.

Figure 2. Setting Network of Over-Current Protection

RESET/Timer

The RESET pin is an open-drain output, and requires to be connected to a pull-up resistor. When over-voltage or under-voltage occurs, the RESET pin will be pulled low and resume to high with a hysteresis.

Users can set the deglitch time of RESET by adjusting the TIMER pin, and there are two choices of deglitch time, 15 μ s and 5 μ s. When the R_{TIMER} is 375k Ω , the deglitch time is 15 μ s; when the R_{TIMER} is 125k Ω , the deglitch time is 5 μ s. Users can choose a suitable deglitch time to avoid protection false triggering.

PROCHOT

The PROCHOT pin is an open-drain output, and requires to be connected to a pull-up resistor. When over-current is detected, PROCHOT will be pulled low within 50 μ s for 15ms. If over-current condition keeps longer than 15ms, PROCHOT maintains low status until over-current protection is released.

Figure 3, Figure 4, Figure5 illustrates RESET and PROCHOT indicator signals.

Figure 5. UVP and RESET Indicator Illustrator

Thermal Considerations

For continuous operation, do not exceed absolute maximum junction temperature. The maximum power dissipation depends on the thermal resistance of the IC package, PCB layout, rate of surrounding airflow, and difference between junction and ambient temperature. The maximum power dissipation can be calculated by the following formula :

$$P_{D(MAX)} = (T_{J(MAX)} - T_A) / \theta_{JA}$$

where $T_{J(MAX)}$ is the maximum junction temperature, T_A is the ambient temperature, and θ_{JA} is the junction to ambient thermal resistance.

For recommended operating condition specifications, the maximum junction temperature is 125°C. The junction to ambient thermal resistance, θ_{JA} , is layout dependent. For WDFN-10L 3x3 package, the thermal resistance, θ_{JA} , is 30.5°C/W on a standard JEDEC 51-7 four-layer thermal test board. The maximum power dissipation at $T_A = 25^\circ\text{C}$ can be calculated by the following formula :

$$P_{D(MAX)} = (125^\circ\text{C} - 25^\circ\text{C}) / (30.5^\circ\text{C/W}) = 3.27\text{W for WDFN-10L 3x3 package}$$

The maximum power dissipation depends on the operating ambient temperature for fixed $T_{J(MAX)}$ and thermal resistance, θ_{JA} . The derating curve in Figure 6 allows the designer to see the effect of rising ambient temperature on the maximum power dissipation.

Figure 6. Derating Curve of Maximum Power Dissipation

Layout Considerations

Layout is very important in RT9553A, if designed improperly, the PCB may radiate excessive noise. Certain points must be considered before starting a layout for the RT9553A.

- ▶ Connect a RC low pass filter to VCC. The recommended BOM of RC filter is 2.2Ω and 0.1μF. Place the filter capacitor close to the IC.
- ▶ Current sense connections must always be made using Kelvin connections to ensure an accurate signal with the current limit resistor located at the device.
- ▶ All sensitive analog traces and components such as CSP, CSN, VCC, EN, PROCHOT, RESET and ILIM should be placed away from high voltage switching nodes to avoid coupling.
